

ELIEZER PRIETO

Trilingual professional with a solid foundation in exact sciences, computational logic, and interdisciplinary problem-solving. Concurrently pursuing three university degrees in Brazil: Software Engineering (UCDB), Economic Sciences, and Pedagogy (Unifatecie), with prior background in nuclear physics (InSTEC). Specialized in modular software development, quantitative modeling, and operational leadership.

Location: Campo Grande, Mato Grosso do Sul, Brazil
Languages: Spanish (native), English (C1), Portuguese (C2)

Availability: On-site & Remote
Focus: Software, Systems Modeling, Data & Education

PROFESSIONAL PROFILE & FOCUS

Interdisciplinary professional focused on solving complex problems through scientific rigor, modular software engineering, and quantitative economic analysis. Graduated from IPVCE Lenin and with 3 years of Nuclear Engineering at InSTEC, I apply formal modeling to structure operational costs, design decoupled software architectures, maintain robust databases, and transfer technical knowledge with structured instructional pedagogy.

SOFTWARE ENGINEERING & ARCHITECTURE

Modular Systems, OOP & Algorithms

2024 — Present

Academic & Applied Projects · UCDB

Modular software development applying formal computer science principles:

- Implementation of data structures and algorithms in Python and C++ optimizing time and space complexity.
- Architectural design patterns (MVC, Repository) and SOLID principles for decoupled, maintainable code.
- Formal UML diagramming (use cases, class diagrams, sequence diagrams) and technical requirements specification.

Relational Persistence, SQL & Version Control

UCDB

Data Modeling · ACID Integrity · Git/GitHub

Design, implementation, and optimization of relational databases:

- Entity-Relationship diagrams (ERD), normalization up to 3NF, and referential integrity constraints.
- Complex queries, ACID transaction management, and indexing for high-throughput consistency.
- Professional Git/GitHub workflows: feature branches, pull requests, and conventional commits.

Web Systems & Analytical Interfaces

Full Stack

Clean Web Architecture · Responsive UI

Development of semantic web platforms and interactive data dashboards:

- Modular web development with vanilla JavaScript and modern CSS without unnecessary dependencies.
- Adaptive responsive design engineered for web accessibility (WCAG) and Core Web Vitals performance.

SCIENTIFIC MODELING & NUCLEAR PHYSICS

Reactor Simulation & Thermal Systems

InSTEC (3 years)

7 Technical Projects in C++ and Python · Mathematical Physics

Advanced scientific training in multivariable calculus and technical thermodynamics:

- Computational modeling of nuclear reactors, fluid dynamics, and non-linear heat transfer.
- Numerical solution of differential equations (Runge-Kutta, finite difference methods).

Numerical Methods & Analytical Validation

InSTEC

Complex Systems Modeling · C++ / Python

Application of high-precision mathematical algorithms with zero margin of error:

- Non-linear function approximation and stochastic modeling of physical phenomena.
- Formal mathematical rigor transferred to verification and robustness in mission-critical software.

ENTREPRENEURSHIP & OPERATIONAL LEADERSHIP

Hasta Tu Puerta · Founder & Operations Lead

Startup

Last-Mile Logistics · Route Optimization

Full operational and executive direction of urban logistics startup under high constraints:

- Heuristic routing algorithms achieving a 40% reduction in delivery times and fuel expenses.
- Rigorous direct/indirect cost structuring, unit margins, and cash flow; 100% self-funded debt-free.
- 1,200+ shipments processed with a 100% effective delivery rate and sustained customer retention.

Operational Leadership & Coordination

2017 — 2023

Civitatis · GuruWalk (Previous Trajectory)

Logistics coordination, group dynamics, and guided experiences for 3,500+ international travelers from 40+ countries across Spanish, English, and Portuguese (4.98/5.0★ rating). Real-time contingency management and assertive communication.

FORMAL EDUCATION

Software Engineering

In progress

Universidade Católica Dom Bosco (UCDB) · MS, Brazil

Software architecture, OOP, data structures, SQL databases, and development lifecycle.

Economic Sciences & Pedagogy

In progress

Centro Universitário Unifatecie · Brazil

Econometrics, operational costs, micro/macroeconomics, learning psychology, and technical pedagogy.

Nuclear Engineering

3 years completed

InSTEC · Higher Institute of Applied Sciences and Technologies

Reactor physics, numerical methods, thermodynamics, and computational fluid mechanics.

IPVCE Vladimir Ilich Lenin

Graduated

Elite Vocational Institute of Exact Sciences · Cuba

Elite preparatory training in advanced mathematics, physics, and experimental sciences.

OFFICIAL CERTIFICATIONS & CREDENTIALS

Operational Cost Structuring

60h · CBO 2512-05

Centro Universitário Unifatecie · Economic Sciences

Official university microcredential in direct/indirect cost analysis, contribution margin, and financial viability.

Corporate Accounting

10h · Virtual School

Fundação Bradesco · Auth: F8BEF3AE

Balance sheets, financial statements (DRE), cash flow management, and organizational solvency.

Business Communication

12h · Virtual School

Fundação Bradesco · Auth: CADCF72

Strategic workplace negotiation, executive writing, assertive communication, and corporate dynamics.

Microsoft Excel 2016 - Basic/Analytical

15h · Virtual School

Fundação Bradesco · Auth: 226452A2

Analytical spreadsheet modeling, logical operators, advanced formulas, and structured data tabulation.
